GUIDELINES FOR USING QGIS SOFTWARE

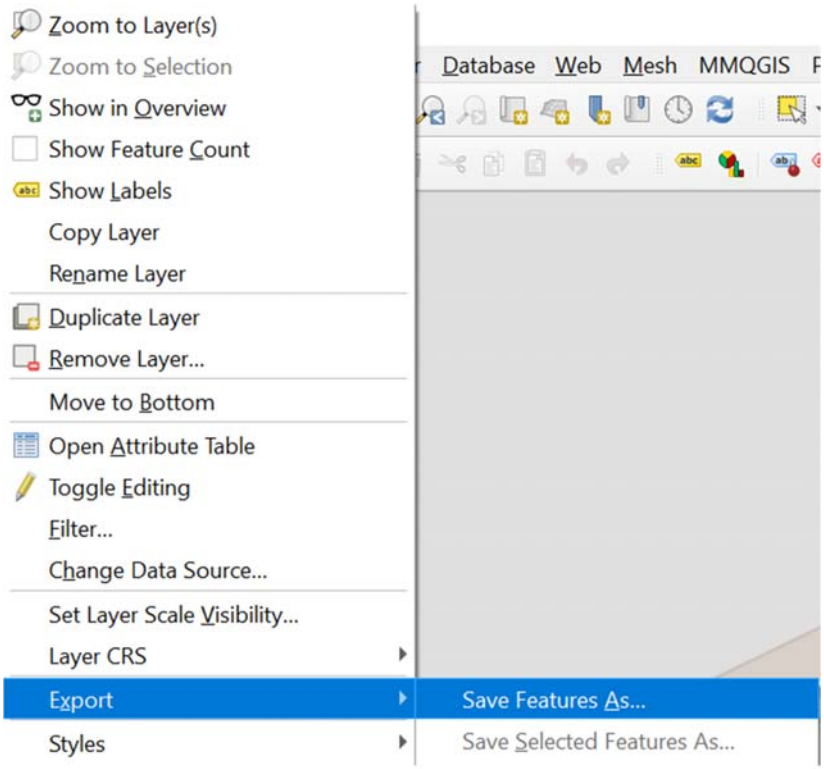

1. The maps made should be static and not dynamic ; rather changes made should be uploaded regularly
2. ***QuickMapServices*** plug-in should be used for marking already marked outlines

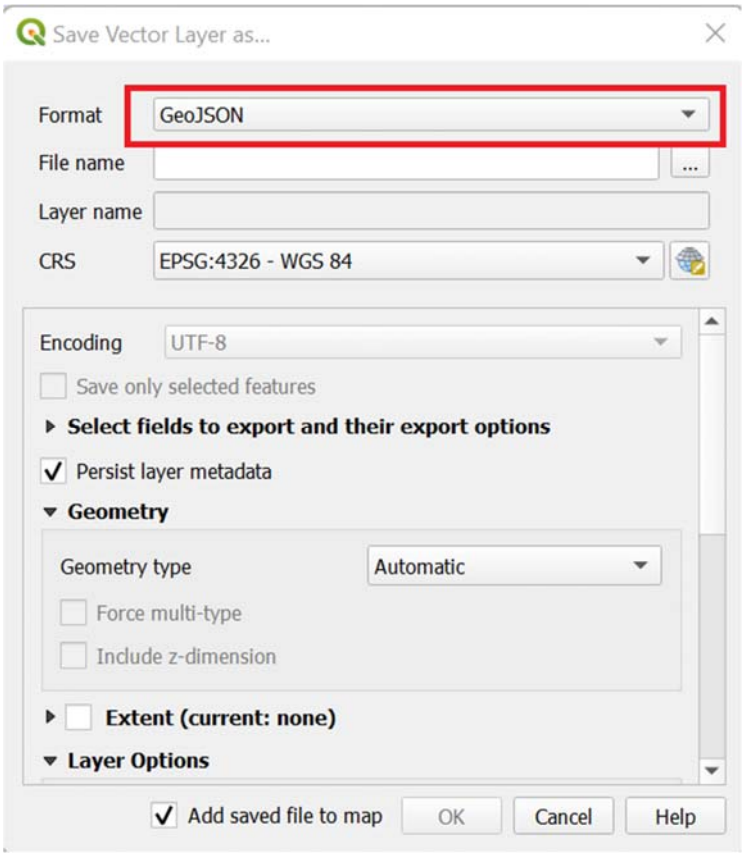

3. The obstacles should have the property type of "*wall*" marked in the **GeoJSON**

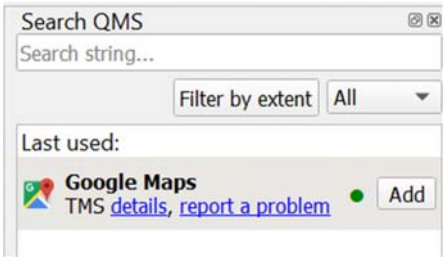

4. Spatial shape data should be exported in the format of GeoJSON

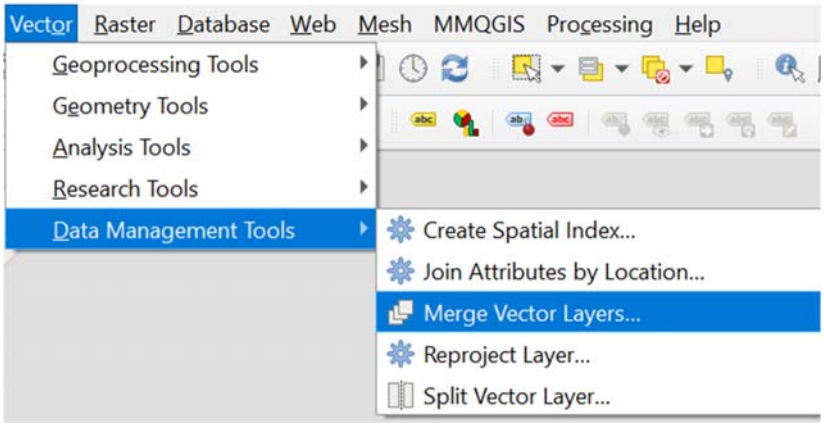

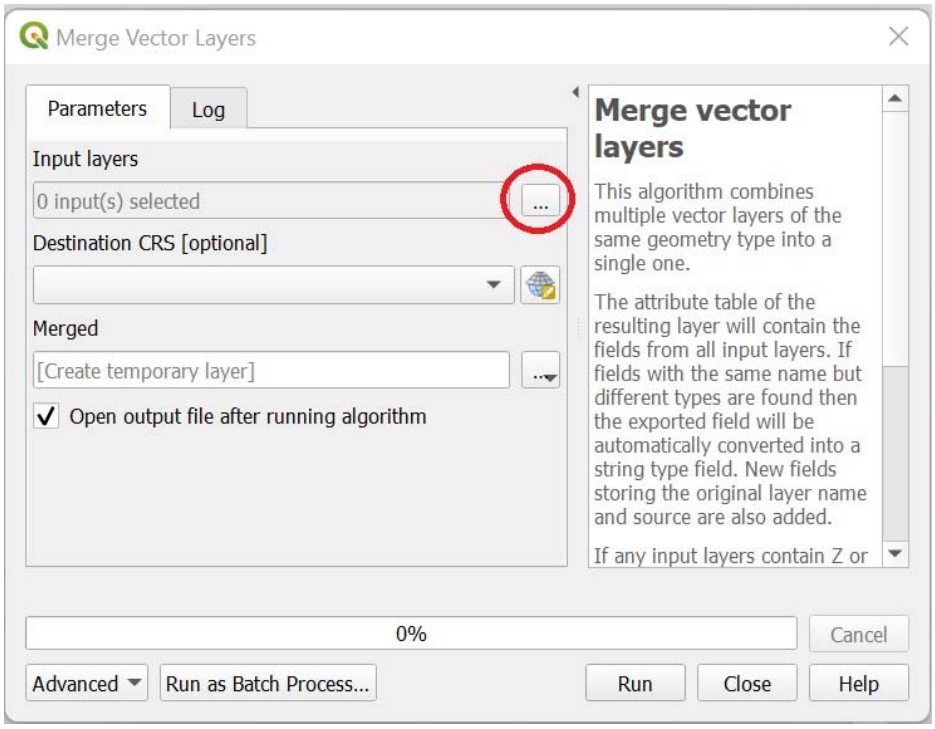

5. In case the building/museum is not present in **OpenStreetMap** then one can use Google Maps and draw the map manually

6. In case multiple shape files are present one can merge the files and convert and export the merged file

7. For merging the files, one can simply hover over ***Vector->Data Management Tools->Merge Vector Layers*** and then select the input layers in the next dialog box and run the process

8. For searching for places one can use ***OSM Place Search***
